

## Micro Technologies launches Micro GBB at the 'World Conference on Disaster Reduction'

Micro Technologies India Ltd has announced that the Company has launched a Global Disaster Reduction IT product named MICRO GBB (Global Black Box) at the World Conference on Disaster Reduction, which was Co-sponsored by United Nations, World Bank etc. This Comprehensive Disaster Management System instantaneously intimates the happening of any natural or man made disasters.

Globally, natural or manmade disasters have struck suddenly, without any prior warning, affecting wide areas, destroying Infrastructure and human / animal lives. In such eventualities, immediate intimation to the disaster management authorities helped reduce the impact of the disaster. To efficiently combat such disasters, Company has spearheaded various innovations to immediately alert the concerned authorities. One such product is MICRO GBB.

MICRO GBB transmits messages instantly on the mobile / email / landline of the user / group of concerned users, upon the happening of a disaster. It captures specialized and validated information, which could be useful for search and rescue operations, early warning, remote sensing, disaster mitigation, trauma management, etc. This device promptly warns the users upon the happening of floods / storms, earthquake, landslides, riots, change in temperature, intrusion, fire, gas leak, power failure, theft etc.

MICRO GBB contains sensors / devices which detects the location, magnitude and the direction in which the disaster is headed.

The salient features of MICRO GBB include Event based Instant alerts around the globe, Event Intimation mapping to multiple Persons, Command Control for action taking officials, Voice Communication, Web Interface, Integration with GIS, Event Recorder, Remote Activation or Deactivation and Customization of commands. this product was the only product of its kind in this international event and was very well received with live enquiries from various users.
