

Micro Technologies Launches Mobile Controller System for Remote Mobile Management

Micro Technologies Ltd. launches Micro Mobile Controller System, a software that helps to remotely manage your own mobile handset with the help of add-on recipient mobile number. This particular software is far beyond just the concept of security, in which it not only creates a backup of all contact details even after the loss of a mobile handset but the registered owner can retrieve, delete the data stored in it.

India is adding somewhere around 8-10 million mobile connections every month and according to some estimates total connections are likely to reach 600 million by 2011. The value of damages associated with misuse of contact details, SMS/MMS records, and pictures on the handsets and the impact of damages are huge. After spending considerable time and efforts on research, Micro Technologies India Limited, an R&D based security and tracking software solutions provider, has come up with an innovative solution.

Micro Mobile Controller has the following unique features:

1. Avoid the misuse of your personal data on the handset by deleting all the records like contact details, SMSs, MMSs, picture gallery within a few seconds with the help of Registered recipient mobile.
2. Retrieve all the contact details.
3. Immediate knowledge of the new SIM number card inserted in your lost/stolen handset. You also receive as a proof, your handset's International Mobile Equipment Identity (IMEI) number and the number of the new SIM card that has been inserted.
4. Receive the address of the nearest cell tower site and determine whereabouts of your handset anywhere in the country.

Reasonably priced at Rs. 499/- for yearly subscription, Micro Mobile Controller can be purchased online at www.micromcs.net
