

MICRO TECHNOLOGIES files for International Patent in 123 countries including USA for Vehicle Security solution.

Micro VBB (Vehicle Black Box) a Vehicle Life support and Security system using Short Messaging Services/Internet had received the acceptance for Patent as per the Acceptance Intimation 287/MUM/2004/5119 from the Indian Patent office. A PCT (patent co-operation treaty) international application has also been now filed for the above-mentioned invention taking the priority of the Indian patent application filed. International bureau of WIPO Switzerland has conveyed their acceptance of our International Application No PCT/IN2004/000152 for the International Patent in 123 countries including USA for the same. Micro Technologies India Limited offers this product, an ISO 9001-2000 leading hi-tech software solutions enterprise based in Mumbai, India. Micro Vehicle Black Box "MicroVBB" is a Life support system having Messaging and Anti-theft features with various sensors installed in the vehicle. This intelligent box senses any intrusion of vehicle doors and immediately communicates such events to the registered user's mobile through SMS.

Micro VBB has the required test certification from International Test laboratories for Vibration, Temperature, Humidity, EMC etc. Micro Technologies has tied up with selected Telecom companies for National and Global Tie up to promote VBB. All communications between Micro VBB and the outside world are powered mainly through mobile technology. The user can control his/her vehicle from anywhere by messaging from their handheld device to "Micro VBB" through SMS, voice call, e-mail. Micro VBB not only has all the features of a cell phone and has the potential to be introduced as a lifestyle device performing diverse functions like:

1. Distress Calls in case of an emergency
2. Two way Voice communications
3. Full control on all vehicle parameters.
4. Location Based Services etc.

Mr.S.G.Koppikar, Director of Micro Technologies said: "We have received enquires from a number of International companies for marketing this product in different countries. We have filed the International application through PCT (Patent Co-operation Treaty) in 123 countries including USA. The communication received from the nodal International Patent Office would benefit us as this would give priority to the Indian Patent application. This is extremely encouraging for our International marketing efforts. We now expect to file similar Patents for many of the other inventions for world-class products and technologies developed by an Indian Enterprise. We, at Micro are in the process of finalizing our global Intellectual Property protection strategy in conjunction with global experts in this area. Micro VBB is for OEM, for car owners and for Fleet Management & logistics."
