

Micro Technologies unveils India's Security Requirements – A Global Perspective at the India Calling Conference held at Brussels, Belgium

Micro Technologies (India) Ltd. unveils its first edition on India's Security Requirements - A Global Perspective at the India Calling Conference 2009 held at Brussels, Belgium. More than 400 people including many eminent personalities from various Corporate and Government Organizations and young entrepreneurs from India and Europe participated in the international 'India Calling Conference 2009', Brussels.

India has been witnessing multiple threats of Insurgencies, Terrorism, Narcotic Trafficking, and Natural & Manmade Disasters, since independence. The first edition on India's Security Requirements would expose a detailed requirement of over 8 billion USD worth Indian Security Market for Critical Infrastructure Security to the Global audience in the next few years. Substantial industrial expansion is expected in the infrastructure sector, cost of security gadgets that need to be implemented will work out to be in the tune of 5bn USD in the coming years. Security installations for manufacturing hubs in sectors, such as petroleum, petrochemicals, and power will grow over 125% by 2012. With major concentration on defense, border, aviation security where the spend is approximately around 20-25 bn USD, the security of critical infrastructures cannot be overlooked.

In the first edition Micro Technologies (India) Ltd. has presented extensive amount of work in developing a National Security Plan wherein understanding the overall security requirements in India, right from addressing the external threats to the level of safeguarding the internal threats. The attempt to construct a National Security Plan has been translated into a book "India's Security Requirement – A Global Perspective" which qualifies and quantifies the right set of information from the Security perspective and give more specific and detailed information to number of multinational companies who are seriously weighing their options to enter as manufacturers, system integrators and solution providers in India or form local alliances and thereby helps global companies gain acceptance and visibility in India. Assuming 'Security' as a key factor, the research work for the book was initiated identifying the critical areas where security is of utmost importance. This edition gives a detail account of the Prevention and Protection Methods, Programs for various security domains like Border and Maritime Security, Identification Security, Cyber Security and above all Critical Infrastructure Security. To name a few, Hospitality Infrastructure, National Monuments & Worship Places, Education Sector, Transport Sector, Communication Sector, Power Sector, Banking & Financial Sector, Public Health & Healthcare Sector, Industry Sector, Agriculture & Food Sector etc.

It depicts the Current Indian Security Market, giving the Market share & size of various security segments of Indian Security Market with the list of existing players in the market. And how the orientation of an industry from a Government based to Public-Private has taken place.

This edition would give a new turn to various sectors and play a huge role in economic development of India. It would not only give a detailed view and growth the country is anticipating in the near future in terms of securing the nation, but also will give an additional thrust to the Investors from abroad.
