

Micro Technologies listed for the NASSCOM ‘Innovative Products Award’ for Wi-Fi Security System

Micro Technologies (India) Ltd., a leading global developer, manufacturer and marketer of security range of products listed for the NASSCOM “Innovative Products Award” for its Micro Wi-Fi Security System, innovative software for monitoring and securing the Wi-Fi network activity.

NASSCOM conceptualize this award taking into account, the importance of innovation for India’s IT-BPO industry and the need for nurturing an innovative ecosystem in the country. The activities under this initiative recognize and showcase innovation in various segments of the IT industry, develop collaborative platforms to spur innovation and provide capital and advisory support for entrepreneurs, engaged in the development of new technologies.

Hacking being one of the biggest threat today, it has become very essential to notice it. Taking into account the increasing threat perception, Micro Technologies came up with **Micro WSS** (Wi-Fi Security System).

Micro WSS is Wi-Fi security system to protect the unsecured and open Wi-Fi network. It is downloadable software which works in the stealth mode and allows the administrator to monitor the activity of the user and provide information about the Wi-Fi access through the authorized web account. It automatically detects the change of security settings and warns the Wi-Fi user and sends the details on to the Server level Secured Web Account of the user to prevent an Evil Twin and Promiscuous Clients attack. It can detect any addition of a user and can send an alert email containing the information about the new machine.

In the present competitive market, Micro Technologies not only stand out with its exclusive range of innovative technologies but also is a trend setter in meeting the current requirements in the field of security.

About Micro Technologies:

Micro Technologies (India) Ltd. is a leading global developer, manufacturer and marketer of security devices. Product lines include the much-needed security devices, life support systems and web-based software. Micro Technologies is recognized as an innovative company at the cutting edge of security technology and one of the first companies to develop security systems using SMS (Short Messaging Services) on a mobile GSM platform. Micro Technologies aims at displaying not just the technological innovation and prowess but also the product diversity in various segments of vehicle, premises, mobile, other assets and now entering Energy & Health Segments.
