

Micro Technologies Updates PR – Sep 09

Micro Technologies bags a bulk order for its advance version of Vehicle Security Product

Micro Technologies (India) Ltd., a leading global developer, manufacturer and marketer of security products bagged the largest order for its advance version of Vehicle Security product; Micro VBB Marshall. This multi-million dollar order for implementing in over 100 locations has come after stringent test and Global Competitions.

Micro VBB Marshall is suitable to be fitted in the automotive environment with main power supply from the vehicle battery. It monitors various parameters like Speed and Coordinates, and sends alert messages to the registered user in case of any tampering. It is a real time GPS based tracking system along with a facility of storing its data in memory with date and time stamps which on regaining the connectivity, can be transferred to the server.

The fortune 500 company plans to deploy the Micro VBB Marshall at its various branches across the nation due to the exclusive and advanced features. This achievement would give a significant turn to Micro Technologies in terms of growth and expansion in other markets and also it would lead to more Global orders which are in discussion.

Micro Technologies to sanitize the operations of one of the largest petroleum company in India by enabling Location Based Intelligence

Micro Technologies implements its Micro Buddy Tracking System to one of the largest petroleum company in India to monitor their line walkers. A job of a line walker is to patrol oil and gas pipelines as well as communication systems on foot, horseback, or by car to locate and repair pipeline leaks, breaks, washouts, and damaged utility wires and poles. But being on field it's not possible to find out that these line walkers are perfectly executing their job of patrolling. Hence this company has found a solution with Micro BTS to monitor and sanitize the working of these line walkers.

Micro Technologies expands its existing International business through a Nairobi based Telecom Company for West Africa

Micro Technologies has entered into a strategic agreement with a **Nairobi based Telecom Company** to market **Micro VBB (Vehicle Black Box)** and its licenses through its dealer's network in the Kenyan market.

With the growing Kenyan market the opportunity for such a product and solution seems to be huge. It's right opportunity for penetrating and expanding its business base in Africa and West Africa.
